

Naming Transformations Card Game

Who am I ?

Each graph card has two sine curves, the original curve and the image curve. The image curve is the result of one or more transformations. Each graph card has its matching transformation card beside it.

Print two sets of cards. Keep one set to help you check answers. Cut out the second set. The answer key (next page) uses the number beside each card to identify matching pairs, so include the card number when cutting out the cards.

Examples of Subsets of Cards

- 1) pairs of cards that have one transformation (e.g., graph cards 1-8 and their corresponding card)
- 2) pairs of cards that have a specific transformation (e.g., vertical translation up)

Version 1

Cover the transformation words and state the transformation(s).

Or, cover the graph and use the transformation words to visualize the graph.

Version 2

Use the whole set of cards or a subset of the cards.

Place the cards face up on a flat surface. Match all the pairs.

Version 3

Play with a partner to make matching pairs.

Use the whole set of cards or a subset of the cards.

Turn the cards face down on a flat surface. Person A chooses two cards. (.../continued)

Version 3 (continued)

If the cards match, Person A keeps the pair and takes another turn. If the cards don't match, turn them face down again. Person B takes a turn. Continue until all pairs are found.

Version 4

Use all the graph cards. Select the cards that include one specific type of transformation. Use uncut pages of cards to check your solution. (.../continued)

Version 4 (continued)

Examples of one type of transformation:

- vertical compression
- horizontal stretch
- horizontal translation left or right.

Answer Key (1 of 6)

Graph Card Number	Words Card Number
1	40
2	58
3	57
4	75
5	41
6	56

Answer Key (2 of 6)

Graph Card Number	Words Card Number
7	59
